

YT-Exploder Manual

I. Parameter files

The parameter files are located in the folder where you installed the YT-Exploder.

1. the „hma.bat“ (only needed when using HMA!)

Start the file „hma.bat“ before the YT-Exploder. This will automatically open HMA! and enable the YT Exploder to perform the IP change on its own. Be sure to change the program path in the hma.bat if you have not installed the YT Exploder in the default order.

2. keywords.txt

Here you define the keywords with which the YT-Exploder should search for your video. Write a keyword in each line.

The YT-Exploder will randomly select a keyword from the list to search your video organically. Choose your keywords so that your video can be found within the first 5 resulting pages.

Therefore long tail keywords are the best one. (long tail keywords consist of several words, for example “youtube views watchtime”).

3. randomsites.txt

To simulate an organic search, you always need a page that you have visited before. For example, if you have a website that links to your video, it's a good idea to add it here. You can set as many "randomsites" as you want - one per line. You can also just leave it at the already suggested ones.

4. useragent.txt

This file lists the different browsers that are simulated by the YT-Exploder. You don't need to change anything here.

II. the input mask

1. enter the ID (not the url) of your video here. The ID is the last part of the url, e.g.

url = <https://youtu.be/Z3jhVHqd67g>, then the...

ID = Z3jhVHqd67g

2. here you enter the number of views the YT-Exploder should execute for you.

3. Enter the watchtime/view in seconds, i.e. how long the YT-Exploder should watch the video. It is best to choose a bandwidth, e.g. 400-500, instead of a fixed value, as this is more like an organic behavior.

The maximum watchtime is 900 sec.

4. your license number is required for the start.

5. shows you how many views are already done.

6. shows you what the YT-Exploder is currently doing.

7. if you work with a proxy, you need the Proxy Gateway IP here.
You can read more about the use of proxies in chapter IV.

If you work with a proxy, click on the checkbox "Use Proxies".

If you are working with the VPN HMA!, click on the checkbox "Use HMA Pro". You can learn more about the use of HMA! in Chapter V.

III. storm proxies

see also our article <http://youtube-views.info/stormproxies/>

If you want to work with stormproxies to encrypt your IP, you need the package "Backconnect Rotating Proxies", with 10 concurrent threads, that you can find here.

40 Threads (40 Simultaneous Connections) ©
~~\$39~~
Monthly
70,000+ Proxy Pool.
Max. 40 Simultaneous Connections.
1 Access IP, ©
Unlimited Bandwidth.
Buy It Now!

80 Threads (80 Simultaneous Connections) ©
~~\$59~~
Billed Monthly
70,000+ Proxy Pool.
Max. 80 Simultaneous Connections.
2 Access IP, ©
Unlimited Bandwidth.
Buy It Now!

Most Popular
150 Threads (150 Simultaneous Connections) ©
~~\$97~~
Billed Monthly
70,000+ Proxy Pool.
Max. 150 Simultaneous Connections.
3 Access IP, ©
Unlimited Bandwidth.
Buy It Now!

Want to test our service? Order \$14/mo package / Maximum 10 Threads / 1 Access IP
PRO users looking for bigger package - Order \$147/mo package / Maximum 200 Threads / 5 Access IP

https://stormproxies.com/rotating_reverse_proxies.html#ordernow

For the normal case the small package with 10 threads should be more than enough. If you need more power, you can of course upgrade without any problems.

The proxy settings are very simple:

STORM PROXIES

Backconnect Proxies

First time here? [Click here to read Setup Guide.](#) Your current IP address is:

IMPORTANT: For scraping websites like Google search please use only main proxies!
If we notice any scraping requests with 3 and 15 minutes proxies, your access to our service will be terminated without previous notice!

If you are not satisfied with service and you want refund, please [contact our support](#) and don't open a paypal dispute and we will reissue refund with 24 hours.
Or you will risk blocking of your access to our service in future and not getting refund.

10 Threads Package - Maximum 1 Authorized IPs and Maximum 10 Threads (simultaneous connections)

Enter Authorized IPs: 1

Choose Proxies Location: USA EU Worldwide (best for scrapping)

Save Settings

One IP per Line

Main Gateways: 83.149.70.159:13012

3 Minutes Gateways: 163.172.48.109:15001
163.172.36.181:15001

15 Minutes Gateways: 63.141.241.98:16001
163.172.36.211:16001

[What gateway to choose?](#)

Under (1) enter the IP you want to encrypt - this is usually your own IP. Select your Proxies Location.

Now you only need to enter the gateway of your choice in the YT Exploder.

3 Minutes and 15 Minutes Gateway:

The number in minutes describes how often a new IP address is being used.

We recommend the 15 minutes gateway, unless you work with short view times of less than 3 minutes.

Then the 3 minute gateway is better suited.

IV. HMA!

see also our article: <http://youtube-views.info/hma-vpn/>

A trial version of HMA! is available here: <https://www.hidemyass.com/pricing>

With the test version you get the download link to the current version 4.xxx. With this version, the focus is on easy operation and you can of course use it with the YT-Exploder. Simply start HMA!, set the few desired options, then start the YT-Exploder. The file "hma.bat" is not needed by the way.

For our purposes, however, we recommend version 2.8.xx, as it has considerably more settings options. You can install both versions, the download for version 2.8.xx can be found here:

<https://support.hidemyass.com/hc/en-us/articles/203677047-HMA-Pro-VPN-v2-8-24-0-release-for-Windows>

In order for version 2.8.xxx to work with the YouTube Exploder, you must

1. start "hma.bat" before the YT-Exploder
2. make the following settings

- Dashboard
- Country selection
- IP address settings
- Secure IP bind
- Speed guide
- Proxy settings

Schedule IP address change

Randomly change IP address every minutes seconds

This option will change your IP address randomly at set intervals. Your connection will be disconnected for a short period of time during the IP address change. This option is therefore not recommended if you wish to maintain an established connection at all times.

IP address check

IP address checker website: [Verify IP address](#)

Third-party IP address checker websites are a good way to verify your current IP address and location. Please note that we list our servers by physical datacenter location and not by the WHOIS address. Some server providers may list their office address as the IP address WHOIS contact which can be in a different location than the datacenter (where the servers are physically located).
